

MOTHERS

HAVE MERCY UPON YOUR UNBORN CHILDREN

(Copyrighted, 1943)

By **ALFRED LAWSON**

UNLESS YOU KNOW THESE THINGS YOU ARE NOT EDUCATED

Mothers: The future of mankind will be decided by your children, for within them will lie the power to make the world better or worse.

Your good actions or your bad actions, mothers, will be followed by the good re-actions or the bad re-actions of your offsprings. Your strong points and your weak points will be transferred to your children according to the positive process of continuous procedure.

So, you prospective mothers who would like to have future great descendants, as well as to do your duty to GOD and man, just read this lesson over and over, again and again many times until you realize the tremendous consequences that will be decided by your own actions during this moment of human existence.

YOUR BODY A MACHINE

First, try and understand that your physical body is nothing more than a machine, made of various substances, that has been loaned to you by the Creator for a specific purpose.

This machine is made up of billions of microscopic cells which are connected together and are operated by minute creatures which this writer named Mental Organisms in his book **MANLIFE**, copyrighted in the year of 1923. Subsequently this writer divided these Mental Organisms into two parts with opposite objectives which he named **MENORGS** and **DISORGS**.

In a later book, entitled **MENTALITY**, the writer explained how these Menorgs were the builders and the Disorgs were the destroyers of such physical machines as man.

DISORGS ARE ENEMIES

The **MENORGS** are the friends and **DISORGS** are the enemies of Mothers, but it is within the power of anyone's mind to decide whether the **MENORGS** will have the strength to build one's body to its maximum usefulness or whether the **DISORGS** will have the stealth to tear down one's body to its final uselessness.

Perhaps some of you mothers are too busy with the Sunday Funnies or the Midnight Frolics to become interested in the realistic part you, yourselves, are taking in the building up or tearing down of the human race. To know yourself and your own possibilities is the most important part of your existence.

MICROBE GROWS TO MAN

The knowledge of birth and growth of human beings should be understood by all mothers above all other things. It is truly wonderful the way a microbe is made to grow into a man. For a complete understanding of this extraordinary subject one must read in full the books **MANLIFE**, **LAWSONOMY**, **PENETRABILITY**, **MENTALITY** and **THE**

ALMIGHTY.

A few paragraphs from the book **MANLIFE** is reprinted as follows:

MAN GROWS FROM SEED

"Seed is the concentrated essence of living formations drawn together and combined by the power of suction, which will reproduce the likenesses and characteristics of progenitors, under the right conditions.

"Seed is the point of suction of a new formation which if fed with proper substances will expand and grow to natural proportions.

SUCTION AND PRESSURE

"Suction is the female of movement. Pressure is the male of movement. Female movement draws in from without and male movement pushes out from within. In seed the male is drawn into the female.

"The foundation of sex is **SUCTION AND PRESSURE**. The difference in sex is but the difference in movement.

"After the male seed has been drawn into the female seed by suction, an internal conflict of forces takes place as the micro-substances of the seed mix and combine into a new form.

"As a result of this conflict either the power of suction or that of pressure predominates. If it is suction the combination then develops into a female form and if it is pressure the combination develops into a male form.

ATTRACTION OF SEX

"The attraction of one sex for the other is merely the attraction of suction for pressure and ultimately a combination through union results.

"The same law prevails between all so-called chemical affinities—suction attracts pressure and particles unite the male with the female into a new formation until Penetrability disintegrates them by currents of different density

UNDERLYING PRINCIPLES

"When biologists take up the study of **LAWSONOMY** and thoroughly understand the underlying principles of Penetrability, they will then give to the world an elaborate and masterful interpretation of this simple law of sexes which I have outlined briefly in a few words.

"The growth of a new formation is caused by feeding the seed.

"After the male seed of a human being has been drawn into the female seed, sufficient power of suction has been established therein to draw from without whatever food is necessary for development to maximum proportions.

"Prior to birth the embryo child draws into itself from the blood of the mother such sub-

stances as are necessary for nutrition and after birth the child continues to draw into itself by the power of suction from external sources such substances as are needed for maintenance and further development.

GROWTH OF HUMAN BEING

"The growth of a human being then is caused, first, by the power of suction which draws into itself external substances, and second by the nature of the substances which it draws into itself.

"The nature of these substances must not only be of the quality needed for the building up process, but must also contain elements that will increase the power of suction as well.

"Increased growth requires increased power of suction and internal pressure.

POWER AND MASS

"The human being grows by adding power and mass to itself. When the power of suction can no longer be maintained, mass then becomes helpless and useless and disintegrates.

"To increase mass, increased suction must cause expansion which will afford greater space for lodgement of new substances and room for an increased number of protoplasmic cells of which the human system is composed.

"These protoplasmic cells are the foundation of the structure itself and they form into tissues which make up, hold together and connect the different bones, muscles, fibers and organs of the system.

"The movement of a bone, muscle, fibre or organ causes suction to draw substances to the part moved which not only feed and maintain the cells of that part but with increased space adds more cells to the tissue which thereby increases its growth.

"Therefore the drawing into himself from without by the power of suction substances that are subsequently prepared for, and used in building and maintaining these cells as well as creating internal movement, can be called assimilation.

"My definition of the word assimilation is somewhat broader than that given in dictionaries and might be summed up as follows:—the whole process through which external substances are drawn into the human body by the power of suction and are converted into the living being.

"No substance can be assimilated that does not harmonize with the composition of the cells of the body.

DISEASE AND DEATH

"To absorb into the system substances that do not harmonize with the cells causes disease and death to follow.

"So it is essential to know the nature of the substances taken into the system and the manner in which they are assimilated.

"It is not only necessary for man to absorb substances that will build up the tissues, muscles, fibers and bones of the body and replace the cells that are constantly worn out, but he must absorb substances that will also furnish fuel for power and heat that will maintain an even temperature of the body

FOOD MAN EATS

"The food man eats supplies, to a large extent, the substances for building, heating and power purposes.

"According to Lawsonomy all power is caused by penetrating currents of different density which either push or pull any movable thing in line with them.

"The heat of the body is kept at a proper temperature by a mixture of certain digested substances with oxygen drawn into the system with the air breathed."

MOTHERS, TAKE NOTICE

So, mothers, take notice that it is the kind of substances that you draw into your bodies that either builds you up or tears you down.

The intelligent **MENORGS** within your bodies want you to furnish them with the kind of substances from which they can build you up, while the opposing forces known as **DISORGS** want you to furnish them with the kind of substances from which they can tear you down.

Now, there are substances that come direct from nutritive plants from which the **MENORGS** can build human beings up to their maximum proportions of usefulness and there are substances that come from poisonous plants from which the **DISORGS** can tear the bodies of human beings down to useless hulks.

Mothers, if you will draw into your bodies substances coming from the right kind of plants, ripe and fresh from the gardens, bushes and trees, together with plenty of fresh air and Sun elements you will increase your vitality to such an extent that you will become ambitious and strong physically, mentally and morally and will want to do the greater work that the Creator expects of you.

POISONOUS SUBSTANCES

But if you draw into your bodies adulterated substances made to sell and excite the taste, or the soot from the smoke of poisonous weeds, then you will decrease your vitality, lose the natural strength to do a greater work and finally become nervous wrecks and degraded souls that will be useless for the advanced work the Creator expects of you, either in your present bodies or those that will be furnished to you in your next life.

During the last few thousand years Civilization has almost wrecked the human race. It has produced more degrading habits among human beings than the millions of preceding years of Barbarism and Savagery combined.

CHEMICAL CONCOCTIONS

As civilized humans learned to invent mechanical contrivances and chemical mixtures they used them mostly to injure themselves. They made knives to cut each other's throats and chemical concoctions to make drunkards and dope fiends of themselves.

It would be like trying to find a hen's tooth in a hay stack as to try to find a civilized creature today who does not smoke dope, drink booze, lie, cheat, steal or murder. As a rule it will be found that the worst liars, cheats, thieves and murderers are habitual dope smokers and booze guzzlers.

A MALIGNANT VICE

During the past fifty years the American people have become addicted to a malignant vice that was almost unknown to them previously. That is the **CIGARETTE HABIT**. Yes, red blooded Americans in those days considered it a disgrace for man, woman or child to smoke those "Coffin Nails."

This writer remembers an experience, while playing with a professional Base Ball Club when he was a young man, which showed how athletes in those days looked upon the "filthy habit."

THE DISGRACED ATHLETE

A new player had just joined the club and after his first game, while undressed in the Clubhouse ready to get under the showers, he lit a cigarette and started blowing smoke from his mouth and nose.

At the sight of it one of the players bellowed out, "Well for will you look at that. Fellows, do you see the same thing that I see?" Then a half dozen players grabbed the frightened imp and threw him out of the door, naked, and into the open field. Then one of the ball players threw his clothes after him and threatened to kill him if he ever came back again. The last seen of that cigarette smoker was when he ran around the Grand Stand with his clothes in his arms but not a "stitch" covering his back.

A few years after that incident it became evident to this writer that the cigarette manufacturer were gradually enticing the American people, through big bill-board and full-page Magazine and Newspaper advertisements, to become addicts to the cigarette habit. So he offered to write a series of free articles advocating

a congressional bill that would make it unlawful to sell or manufacture cigarettes in America, in order to save the people of this nation from slipping into its dire pitfalls.

AFRAID TO PUBLISH IT

However, no newspaper or magazine manager dared accept the offer to stop the vice at its source. Now this country is paying horrible penalties in lost manhood, womanhood and childhood for not looking ahead and preventing the vice before it had sunk its deadly fangs into the hearts and souls of the people.

The inexorable law of MANE-VERABILITY, however, has again proved that for every act there is a re-act for better or worse, and, in the cigarette vice it has proved by its reactions that it is decidedly for the worst.

Fifty years ago there were less than fifty thousand cigarette addicts in America while today there are more than Fifty Million of them. Now the output of manufacturers aggregate more than Two Hundred and Thirty Billion cigarettes annually.

This enormous increase in the number of cigarettes manufactured and the large number of addicts ensnared thereby, has had much to do with man's fifty percent increase in crime during the past fifty years. It has also necessitated largely increased numbers of jails, hospitals and lunatic asylums. The records show that almost all criminals smoke cigarettes.

Unfortunately, a large number of the women in America, many of them mothers, have become victims of this degrading practice.

CIGARETTE BORN BABIES

The embryo of the unborn child must be furnished with nourishment from the blood of the mother. So, if the mother's blood is contaminated with substances from poisonous weeds, drawn into the body from the soot of smoking cigarettes, then the blood of the coming child will be poisoned before it is actually born.

Whether the child is born dead or whether it writhes in pain for a few weeks before passing out of existence is decided by the quantity of poisoned blood the mother has accumulated within herself.

Very few babies born from habitual smoking mothers live to be three years old and those that live for a longer period are physically, mentally and morally unfit to cope with the higher grade mortals whom the Creator depends upon to lead humanity to a higher state of intelligence.

In the sight of GOD it is a sin for a woman to deliberately draw into her body poisonous substances that will weaken it.

It is one thousand sins coagulated, for a woman to draw into her body poisonous substances that weaken the physical, mental and moral lives of her children.

It is a crime against posterity for the older ones to teach the younger ones falsities that have been thrust upon them by their ignorant progenitors.

ENTICED BY OLD FOLKS

Well does this writer remember how he was enticed by the older ones to smoke tobacco within a pipe. In fact, they actually told him that he would never become a man unless he smoked a pipe. So upon the so-called educated elders advice he learned to smoke tobacco but quit the filthy habit ten years afterward.

Anybody can quit bad habits if capable of exerting sufficient will power to do what is RIGHT instead of continuing to do that which is WRONG.

Women who live natural lives and choose as their husbands men who are intelligent and free from all degrading vices, can bring to life perfect children, on condition that they follow the principles set forth in LAWSONOMY.

When this writer says that a cigarette smoker is helping the destructive DISORGS, who are trying to kill him by stabbing to death the constructive MENORGS that are trying to save his life,

this writer is doing him a service just as if he warned him of a murderer standing behind his back with an upraised knife in his hand about to stab him to death.

With the aid of the poisonous substances from the smoke of the cigarette, the DISORGS first attack and weaken his mental system and then his heart, liver and other organs until the smoker finally has no strength left to keep body and soul together and finally departs as a moral suicide disgraced before GOD.

The MENORGS are the designers and builders of man. They

improvements for the future.

They breed within their descendants the inclination to construct better and better machinery with each succeeding generation. They instill within them ambition to develop greater and greater thinking machines.

These menorgs know that their thoughts and acts will be engraved upon the mental functions of their descendants and that to create advanced thinking in them they must first do such thinking themselves.

They know that if they think clean constructive thoughts that their descendants will do like-

science, happy disposition, and high aims go far towards keeping one healthy, ambitious and youthful. Bad morals cause early decay of both mind and muscular system.

As one thinks so one's habits grow. A trifling immoral thought started in the mind grows like a weed in the brain—at first a temptation and then a fixed habit—spreading forth disease it overpowers the conscience and finally controls the mind. As it grows it builds rotten machinery in the brain and little by little crowds out every symptom of good character that remains.

dulged in by the weakest of our forefathers. Therefore it is about time that we abolish such idiosyncrasies and adopt habits that will strengthen our bodies and minds and develop moral and spiritual magnitude within ourselves.

PROVABLE NATURAL LAWS

Many years ago this writer realized that he was born to improve mankind. So to fulfill this mission he developed the most far reaching program ever offered to the human race. It is a program based entirely upon provable Natural Laws and if adopted will give Justice to Everybody that will Harm Nobody.

During the year of 1931, when 20,000,000 men were thrown out of work and anarchy prevailed, this writer started the first department of this program by organizing the Direct Credits Society and proving to the people by facts and figures just why, in this productive land, they were forced to go hungry without jobs.

He then introduced to his most intelligent followers with unselfish inclinations the great principles of LAWSONOMY that not only feeds the human cells physically but also feeds and expands them mentally.

The Direct Credits Society now demands that its appointed officers give up all vices, follies and falsities in order to set a good example for others to follow as we cannot trust our instructors to mislead the people by false teachings. So they must either be true to our principles or give up their officership.

A NEW GREAT RACE

We are especially interested in building up the characters of children who have not yet acquired the bad habits of the older folks so that they may grow up clean and capable of building at the foundation of a new great race upon Earth that we are aiming at.

The child is the greatest asset of the future and its physicality, mentality and spirituality must not be stunted by the depravities of its forefathers.

When society fails to give this new comer every care and opportunity to develop to its highest standard of performance, it not only cheats the child but also robs posterity of what he might have accomplished for it.

God now decrees that a new species be started by the most unselfish people of the world and be built up from generation to generation until a super race is bred upon Earth that will exterminate selfish gold-worshipping tactics from the face of the Earth.

So, we who believe in the higher principles of life, must get together, and by combination, coordination and concentration of action, create sufficient force to establish the birth of a new species that will live up to God's Natural Laws as He expects mankind to do.

There are enough unselfish people on earth now to plant the seed for a new species. They must be brought together and cooperate for a single righteous purpose. They must put principles above their own cravings.

DUTY TO GOD AND MAN

We must consider it a duty to God and humanity to sacrifice ourselves, if necessary, for the good of the whole species.

Just as the Menorgs organize and stand together to save the body of man from being wrecked by the Disorgs, so this new unselfish species must organize and stand together to save humanity from being wrecked by those selfish creatures that now have control of it.

The study of LAWSONOMY will develop in human beings a new sense of dimensions, proportions, densities, spheres and scopes that will bring them out of the ignorance of ages and transform them into superior beings.

So, mothers, have mercy upon your unborn children and by your own self sacrifices give to them a chance to live and develop according to GOD'S provable Natural Laws.

APPRECIATION

UNITED STATES ARMY RECRUITING STATION

ROOM 631 FEDERAL BUILDING

DETROIT, MICHIGAN

October 4, 1940.

IN REPLY REFER TO:

Mr. Alfred W. Lawson,
Direct Credits Society,
606 Woodward Avenue,
Detroit, Michigan.

Dear Mr. Lawson:

A copy of your publication "The Benefactor" with your article "Salute the Flag or Get Out" has reached my desk.

I want to compliment you on the spirit and the forthright manner that you have taken in the interest of National Defense. Believe me, your attitude could well be emulated by many other publications, for you certainly "pull no punches" and you leave no doubt in anyone's mind concerning the stand of your group. Your recommendations for immediate action on our National Defense Program is well received and it is sincerely hoped this program does speed up; with an aroused citizenry demanding it, results will be obtained.

I am well aware that receipts from advertisements is one of the principal sources of maintaining any paper and when I note the "cut" of Uncle Sam's "Defend your Country" poster on page 4, I am compelled to again express my appreciation for this courtesy and genuine expression of cooperation. This has been noticed before and I have endeavored to learn to whom I should address my appreciation, but have never learned that individual's identity. I take this opportunity of extending that appreciation to all concerned.

Again, thanks for an active, aggressive interest in the National Defense Program of our country and for the assistance rendered the Recruiting Service of the United States Army.

Very truly yours,

J. L. BACHUS,
Lt. Colonel, Infantry,
District Recruiting Officer.

produce the seed from which he is developed.

Not only do they put into the seed a physical likeness of the parents but they also put into it their mental qualities as well.

The MENORGS understand Economics as the first material law of Nature. They are marvels in the knowledge of physics and chemistry and know how to move matter about from one sphere to another and change it from one density to another and increase its size from one scope to another.

Besides producing within the seed a complete model of the progenitor they also create within it an exact reproduction of themselves with full powers of procedure to enlarge the microscopic model to a greater scope, transfer it into a greater sphere and change it into a greater density.

They construct machines that do their own thinking. They inculcate within their unborn successors the knowledge to carry forward the plans that they themselves begin. They promulgate

wise.

So, if parents will follow the inspiration of their MENORGS they can develop splendid character that can be transferred as a marvelous gift to their children.

The physical attributes and mental attitude of the parents during the two years prior to the birth of a child is that which will largely influence its character afterward. During that period they should obtain natural nourishment, exercise and rest, and permit only the most intelligent and truthful thoughts to enter their minds.

Love and kindness shown to each other by the parents during the pre-birth period will have a good influence upon the unborn child and help to make it kind and considerate towards all of GOD'S creatures after it grows up.

If it was not for character, whereby man will make every known sacrifice for the sake of principle, he would be no better than the beasts of the field.

A good character, clear con-

Association with immoral people is as dangerous for those with good morals as contact of healthy bodies is with people with smallpox, or venereal disease. The germs of immorality are as penetrating and poisonous as are the germs of physical diseases.

A mind dependant upon immoral thoughts, vulgar stories, or obscene pictures for pleasure reflects a brain whose twisted roots are soaked with mental corruption.

The MENORGS endeavor to instill into man the power to reason and act according to natural laws. To do that he must be able to control his own senses and develop a mind and body for useful work instead of for ludicrous pleasures.

The use of drugs, strong beverages, tobaccos and candies were all swallowed by the ancients and such things as night clubs, licentiousness, obscenity, brutality, cheating, foul language, gluttony and misrepresentation are all old-fashioned practices that were in-
